AI-Powered Operations Control & Audit Platform

100%
Document Cross-Verification

90%
Faster Operational Validation

Zero
Compliance Slippages

WHAT IS OPERATIONSPOD?

OperationsPod is an AI-powered operations control platform designed to automate audit, compliance, validation, and approval workflows across procurement, sales, quality, and operational processes.
Integrated with ERP systems and operational records, the platform continuously verifies transactions, identifies discrepancies, validates compliance requirements, and provides actionable recommendations before issues impact business operations.

BUILT FOR MODERN OPERATIONS TEAMS

Operations teams manage procurement records, sales transactions, quality documentation, compliance requirements, approvals, and ERP data across multiple systems. OperationsPod centralizes these activities into a single platform to improve visibility, strengthen controls, and reduce operational risk.

ScalePods

Core Platform Capabilities

PURCHASE AUDIT & VERIFICATION:

Validate procurement documents, supplier records, invoices, warehouse receipts, and transport records against ERP data and compliance requirements.

SALES AUDIT & COMMERCIAL CONTROLS:

Verify sales transactions against approved orders, production records, dispatch information, and commercial approvals.

QUALITY & SPECIFICATION VALIDATION:

Compare product specifications, quality certificates, and manufacturing records against approved customer requirements.

AUDIT INTELLIGENCE & DECISION ENGINE:

Automatically identify discrepancies, assign audit scores, classify exceptions, and generate approval recommendations.

OPERATIONS DASHBOARD & ANALYTICS:

Track audits, approvals, exceptions, compliance issues, operational trends, and performance metrics through centralized dashboards.

AI OPERATIONS ASSISTANT:

Access operational insights, investigate discrepancies, analyze risks, and retrieve information through natural language interactions.

ScalePods

How OperationsPod Works

Connect Operational Data

Integrate ERP systems, procurement records, quality documents, sales transactions, and supporting operational records.

Validate Transactions

Automatically compare information across documents, ERP records, approvals, and quality specifications.

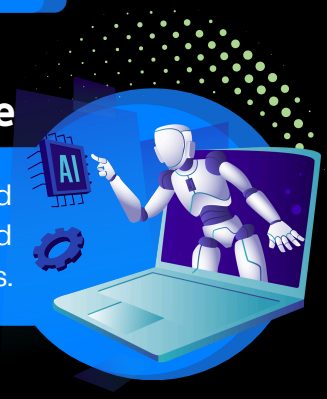

Identify Exceptions

Detect mismatches, compliance issues, missing records, quality deviations, and operational risks.

Generate Audit Intelligence

Assign validation scores, classify outcomes, and provide variance analysis with detailed explanations.

Route for Approval

Trigger configurable maker-checker workflows and approval processes based on validation outcomes.

Monitor Operational Performance

Track audit outcomes, operational trends, compliance metrics, and process performance through centralized dashboards.

KEY BUSINESS OUTCOMES

By automating document verification, transaction validation, quality compliance checks, audit controls, and operational approvals, OperationsPod helps organizations improve operational accuracy, strengthen compliance, reduce manual verification effort, and increase visibility across business operations.

IDEAL FOR

- Manufacturing Companies
- Metals & Steel Businesses
- Industrial Enterprises
- Distribution & Supply Chain Organizations
- Procurement & Operations Teams
- Compliance & Internal Audit Functions
