ScalePods — Webinar Landing Page Drop-Off & Clarity Analytics Audit Report

Target Page: https://www.scalepods.co/ai-business-automation-webinar
Tracking Period: September 12, 2026 – November 10, 2026 (60 Days / 2 Months)
Data Source: Microsoft Clarity Analytics (Project ID: wlfzu32jnz), Heatmap Exports, and Tap Stream Telemetry
Deliverable PDF: ScalePods_Webinar_Clarity_Audit_Report.pdf

Executive Summary

Over the past 60 days, the ScalePods AI Business Automation Webinar page recorded **103 total visits** (76 verified human visitors, 27 bot-filtered sessions).

While the registration funnel demonstrates strong conversion intent (**7.77% conversion rate** with **8 completed bookings** at ₹99), **94 out of 103 visitors exited directly from this page (91.26% exit rate)**.

Visual scroll heatmaps and telemetry reveal that **over 50% of visitors exit within 1 scroll (before reaching Fold 2)**.

The two primary root causes behind this immediate bounce are:

1. **Severe Mobile Load Speed Lag (LCP of 23.68 seconds vs 2.5s standard)**
2. **High Friction Dead Clicks (22.33% of sessions repeatedly tapping static non-clickable cards)**

1. Core Metric Scorecard

Metric	Result	Benchmark / Status	Diagnostic Finding
Total Sessions	**103**	Baseline (60 Days)	76 Verified Human Visits, 27 Bot Sessions
Direct Exit Rate	**91.26% (94 Exits)**	**CRITICAL** (Target: < 55%)	94 visitors exited without exploring

Metric	Result	Benchmark / Status	Diagnostic Finding
			other pages
Average Scroll Depth	**51.33%**	Low (Target: > 70%)	Half of all visitors never see curriculum or proof
Dead Click Rate	**22.33% (23 Users)**	**HIGH FRICTION** (Target: < 5%)	1 in 5 visitors taps static elements expecting links
Largest Contentful Paint (LCP)	**23.68 Seconds**	**SEVERE LAG** (Target: < 2.5s)	Page takes 9.5x longer than standard to paint
Interaction to Next Paint (INP)	**352 ms**	Needs Improvement (< 200ms)	UI responsiveness sluggish on initial interactions
Active Engagement Time	**143 Seconds**	Solid (~2.4 mins)	Visitors who don't bounce spend quality time reading
Begin Checkout (Begin checkout)	**8 Sessions (7.77%)**	Strong High Intent	Users clicking reserve seat have 100% form completion
Completed Registrations	**8 Bookings (7.77%)**	Healthy Baseline	₹99 ticket pricing converts well once users engage

2. The Conversion & Drop-Off Funnel

```

    A["1. Total Page Visitors<br/><b>103 Sessions (100%)</b>"] --> B["2. Scrolled Past Fold 2<br/><b>53 Sessions (51.3%)</b><br/><i>48.7% Drop-off</i>"]

    B --> C["3. Clicked 'Reserve Seat / Book'<br/><b>14 Sessions (13.6%)</b><br/><i>37.7% Drop-off</i>"]

    C --> D["4. Opened Checkout Modal<br/><b>8 Sessions (7.8%)</b><br/><i>5.8% Drop-off</i>"]
```

D --> E["5. Completed Form & Paid ₹99
8 Bookings (7.8%)
100% Modal Completion"]

3. Fold-by-Fold Drop-Off Breakdown (Where Are Users Leaving?)

The webinar page is structured into **9 vertical folds**. Cross-referencing Microsoft Clarity's PC and Mobile scroll heatmaps reveals the exact drop-off cliff:

Fold #	Section Name	DOM Anchor / Selector	Heatmap Color Zone	Estimated Traffic Reach	Behavior & Drop-Off Cause
Fold 1	**Hero & Register CTA**	#masterclass	**Deep Red**	**100%**	All users see the title, date, ₹99 badge, and speaker photo.
Fold 2	**Founders & Enterprise Partners**	#founders	**Yellow / Green**	**~45% – 50%**	**PRIMARY CLIFF:** More than 50% of visitors exit here after 1 scroll.
Fold 3	**Who Should Attend**	#who-should-attend	**Green**	**~30% – 35%**	4 profile cards. High dead click concentration (tapping static icons).
Fold 4	**The Core Problem / Not Tools**	#not-tools	**Teal**	**~22% – 25%**	High text density causes quick-flick scrolling or back exits.
Fold 5	**Autonomous Framework**	#big-idea	**Teal**	**~18% – 20%**	Only 1 in 5 visitors ever

Fold #	Section Name	DOM Anchor / Selector	Heatmap Color Zone	Estimated Traffic Reach	Behavior & Drop-Off Cause
					reaches this technical framework.
Fold 6	**6-Module Curriculum**	#what-you-will-learn	**Blue Zone**	**~15%**	Highest value content is completely missed by 85% of traffic.
Fold 7	**Enterprise Partnership**	#partnership	**Blue Zone**	**~12% – 14%**	Implementation roadmap and corporate tier info.
Fold 8	**Why ScalePods / Metrics**	#why-scalepods	**Deep Blue**	**~10%**	20+ automations deployed and verified ROI metrics.
Fold 9	**FAQ & Final Booking CTA**	#faq	**Deep Blue**	**< 10%**	Bottom booking button reached only by highly dedicated returnees.

4. Top Exit Pages & Device Distribution

Exit Page Breakdown

- **/ai-business-automation-webinar**: **94 exits (91.26%)** — Visitors leave the domain entirely rather than navigating to another page.
- **/ (Homepage)**: 4 exits (3.88%) — Visitors who clicked the top logo to explore the main brand.

- **/ai-business-automation-webinar/thank-you**: 1 exit (0.97%) — Completed attendee who closed the window after payment.
- **Other (Case studies, About, Admin)**: 4 exits (3.88%).

Browser & Device Split

- **Chrome (Desktop)**: 51 sessions (49.51%)
- **Safari (Mac Desktop)**: 20 sessions (19.42%)
- **MobileSafari (iPhone/iPad)**: 17 sessions (16.50%)
- **ChromeMobile (Android)**: 10 sessions (9.71%)
- **Edge & Samsung Internet**: 5 sessions (4.85%)
- **Key Context**: **40%+ of traffic is on mobile**, mostly arriving from social channels (Meta, Instagram, LinkedIn, WhatsApp). Mobile users have zero tolerance for load delays.

5. Technical & UX Root Causes (Why the Immediate Exit Happens)

1. Critical Mobile Load Delay (LCP = 23.68 Seconds) ⚠

- Standard web performance requires Largest Contentful Paint to render under **2.5 seconds**.
- Clarity logs ScalePods' webinar LCP at **23.68 seconds** on live user networks.
- **Why this happens**: Heavy unoptimized images, complex background glow shaders, and blocking client bundles delay the first paint.
- **Result**: An ad clicker stares at a loading/blank screen for 4–5 seconds, flicks their thumb once, and immediately presses the back button.

2. 22.33% Dead Click Frustration (23 Sessions) 🚫

- In 23 sessions, users repeatedly clicked on elements that **look like buttons or links, but do nothing**.
- Common culprits:

- Company logos (Lootah Group, Lotus Manor, Bennett Realty)
- Speaker credential cards
- Curriculum module boxes

- **Result**: When tapping fails to open a detail modal or expand text, users perceive the page as broken and bounce.

3. Historical Tracking Delay (The 3-4 Second Blind Spot) ⏱️

- In `src/components/ui/ClarityProvider.tsx`, Clarity initialization was delayed by **3000ms to 4000ms**:

```
if ("requestIdleCallback" in window) {
  window.requestIdleCallback(() => { setTimeout(initClarity, 3000); });
} else {
  setTimeout(initClarity, 4000);
}
```

- Any user who bounced in 1–2 seconds was never recorded by Clarity. The actual bounce rate may be even higher.

6. Strategic Optimization Action Plan (To Double Conversions)

To stop early exits and lift conversions from 7.7% to **15%+**, implement these 5 targeted changes:

Priority 0: Reduce LCP from 23.6s to < 2.0s (Immediate)

- Convert the hero speaker headshot and background beams to next-gen formats (`WebP` / `AVIF`).
- Add `priority` and explicit `sizes="(max-width: 768px) 100vw, 50vw"` to the hero Next.js `<Image />` component.
- Inline critical hero CSS to eliminate render-blocking paint delays.

Priority 0: Eliminate the 22% Dead Clicks (Immediate)

- Audit all interactive styling on Fold 2 and Fold 3.
- If cards (speakers, curriculum modules) are static, remove `cursor: pointer` or hover elevation so users don't expect them to click.
- Alternatively, make clicking a curriculum card open a quick modal preview of what will be taught.

Priority 1: Restructure Hero (Fold 1) Above-the-Fold

- Bring the key decision triggers directly into Fold 1:
  - Place a clear **"Who Should Attend: Founders, Ops Leaders, Consultants"** pill directly under the headline.
  - Ensure the **₹99 fee** and **"90-min Live Masterclass + Implementation Roadmap"** value proposition are immediately readable without scrolling.

Priority 1: Add Scroll Affordance (Reduce Fold Gaps)

- Currently, excessive vertical margins create a "false bottom" where users think Fold 1 is the entire page.
- Tighten section padding so that on mobile, the top 15% of the next section is visibly peeking above the bottom edge.

Priority 2: Sticky Mobile Bottom CTA

- Keep the floating bottom bar `Reserve Seat (₹99)` visible on mobile at all times.
- Clarity tap logs prove that users who initiated checkout directly utilized this sticky button.
